This drummer's throne is comfortable, convenient and solidly manufactured. The ergonomically shaped and elaborately upholstered seat with sweat-reducing velvet cover balances superior posterior support and freedom of motion. The height adjustment is carried out by a robust rotary spindle. A two-piece plastic-lined clamp fixes the desired seat height. The continuous height adjustment ranges from 465 to 670 mm. A solid clamp connects the seat with the rotating spindle. The upper part remains rotatable even in fixed state, without self-adjustment of the spindle. The three double-braced legs and large rubber feet guarantee a stable stand. The matching carrying case 14003 is optionally available.
