| Special features | integrated shock absorber; gradual height adjustment system |
| Tube end(s) | diameter 1.378", integrated threaded bush M10 for crossbars |
| Type | pure white |

Attractive stand for lights and loudspeaker cabinets. Thanks to the heavy, flat steel plate (21.653 x 21.653"), the stand is ideal for use where space is at a premium. A carrying handle, a cable management system and four stable feet are further useful features. The usable height is between 55.905 and 95.275" and can be reached in 5 steps of 200 mm. The tried and tested K&M clamping screw and the robust locking bolt are used for fixing. The integrated M10 threaded bush enables the attachment of a truss or the direct attachment of lights. The maximum load capacity with full extension is 66.138 lbs.
